

Harsh Ledwani

Computer Science Engineer

ledwani830@gmail.com | +91 8510824637 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science undergraduate with strong interest in full-stack development, backend systems, and scalable application design. Experienced in building end-to-end web applications, machine learning systems, and real-time processing pipelines. Solid foundation in data structures, distributed systems, and cloud computing, with hands-on project experience across multiple domains.

TECHNICAL SKILLS

Languages: C++, Java, Python, C

Frontend: React.js, Next.js, HTML5, CSS3, JavaScript

Backend: Node.js, Express.js, REST API Design, API Integration

Databases: MongoDB, MySQL, PostgreSQL, Supabase

Cloud & DevOps: AWS (EC2), Cloud Computing, Virtualization, CI/CD Concepts

Security: Cryptography (RSA, AES), Hashing (SHA), Network Security, Authentication Systems, IDS

Distributed Systems: Synchronization, Deadlock Handling, Fault Tolerance, Distributed Architecture

ML & Libraries: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow

Tools & Platforms: Git, GitHub, Linux, Ubuntu, VS Code, Google Colab

PROJECTS

Neuro-Adaptive AI Learning Assistant [GitHub →](#)

Ongoing | Group Project

- Developing an AI-powered adaptive learning platform that personalizes curriculum flow and difficulty in real time based on each user's interaction patterns, response accuracy, and session history.
- Implementing a dynamic assessment engine with knowledge-state tracking and learning path optimization, ensuring users are continuously challenged at the right cognitive level.
- Designing backend logic for behavioral analysis and intelligent feedback generation, drawing on cognitive load theory to improve knowledge retention outcomes.

F1 Race Analytics Platform [GitHub →](#)

- Built a full-stack Formula 1 analytics application using React.js, Node.js, and REST APIs, featuring interactive dashboards that visualize driver performance, lap times, pit stop strategies, and season standings.
- Integrated multiple external APIs and structured historical datasets to support both real-time race tracking and deep historical analysis across multiple seasons.
- Architected a scalable backend with modular REST endpoints and a clean, responsive frontend optimized for performance across different device sizes.

Zunj Divyang Sanstha – NGO Donation Platform [GitHub →](#)

- Led frontend development using React.js, building a fully responsive donation platform that allows users to browse active campaigns, track fundraising progress, and contribute securely.
- Integrated the Cashfree Payments API with robust webhook handling to ensure real-time payment confirmation, transaction logging, and donor receipt generation.
- Implemented a campaign management dashboard with live progress tracking and transparency reports, helping the organisation build donor trust and accountability.

LEADERSHIP & ACTIVITIES

- Conducted workshops on C programming and Linux fundamentals for junior peers, improving foundational knowledge across the batch.
- Organized and facilitated robotics workshops for school students, focusing on hands-on problem solving and logical thinking.
- Active member of the college technical fest design team — contributed across planning, creative direction, and on-ground execution.
- Played a key role in the fresher induction program, coordinating student onboarding, registration, and orientation logistics.

EDUCATION

Qualification	Institution	Year
B.Tech – Computer Science Engineering	Symbiosis Institute of Technology, Pune	May 2027 (Expected)
Class XII (CBSE)	Greenway Modern Sr. Sec. School, New Delhi	April 2023
Class X (CBSE)	Greenway Modern Sr. Sec. School, New Delhi	April 2021
